

Lighting the way.

Koehler™ WHEAT® LI Cap Lamp
LITHIUM-ION POWERED!

Koehler does it again! Using patented LED and lithium-ion technology, the new "WHEAT LI" is 75% lighter and 66% smaller than lead acid powered cap lamps.

27 hours of light with the new 5300 LED Series Head Assembly
17 hours of light with the 5200 Mark V Series Head Assembly

Koehler's new lithium battery starts bright and stays the same brightness over your entire shift. The LI's quick charge capability boasts a 2:1 charge ratio; full charge in less than 8 hours. When the battery starts to get low, the low battery indicator gives you advanced notice. Now that's a bright idea!

Additional features include:

- LI battery is an IS approved power source
- Compatible for use with most communication tagging systems
- Tag holder is field-installable on existing units
